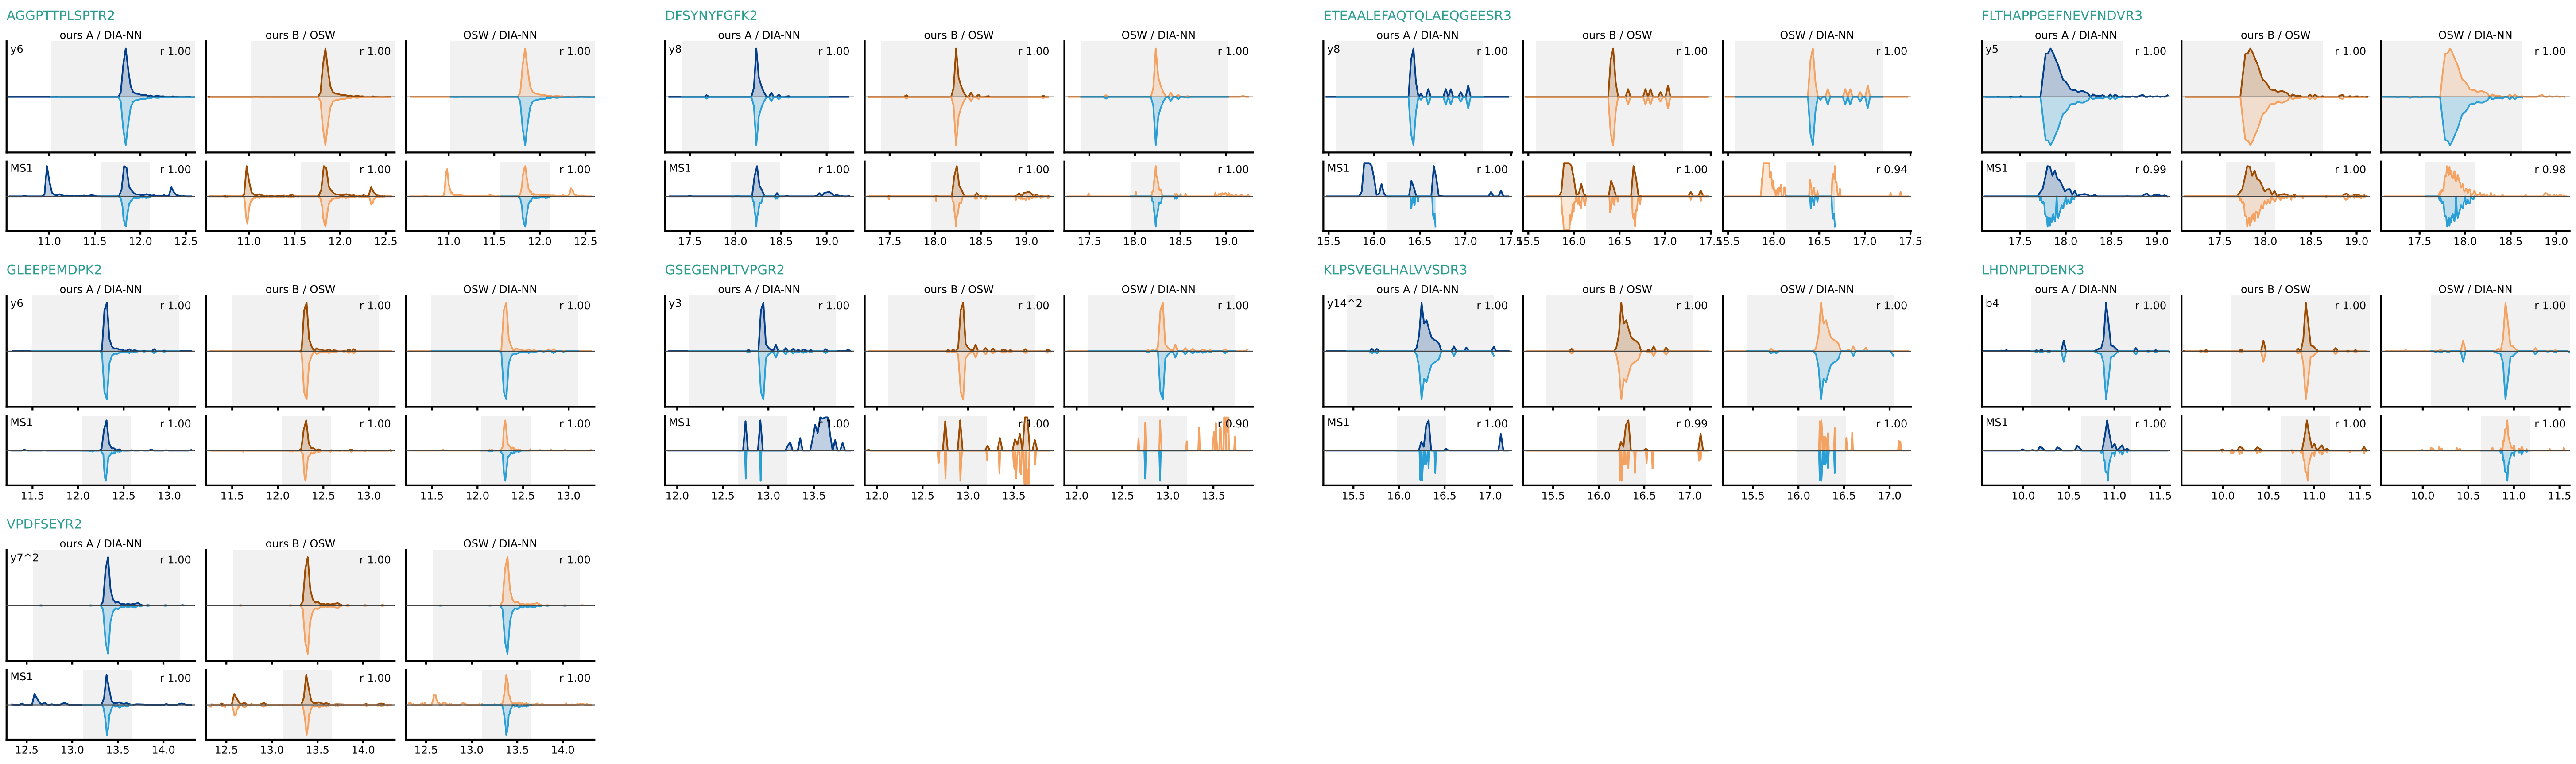
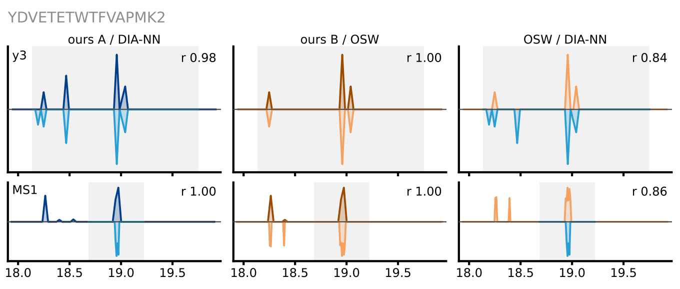
Run 01, random 50: mirrored pairwise XICs by divergence mode

Each precursor: three pair panels, first engine up, second mirrored down; top: top library fragment, bottom: MS1 M+0; RT in min; each trace scaled to its max inside DIA-NN's span (grey); r = Pearson on common span. ours A = DIA-NN rules (max, mass-corrected), ours B = OpenSWATH rules (sum, unit isotope spacing).

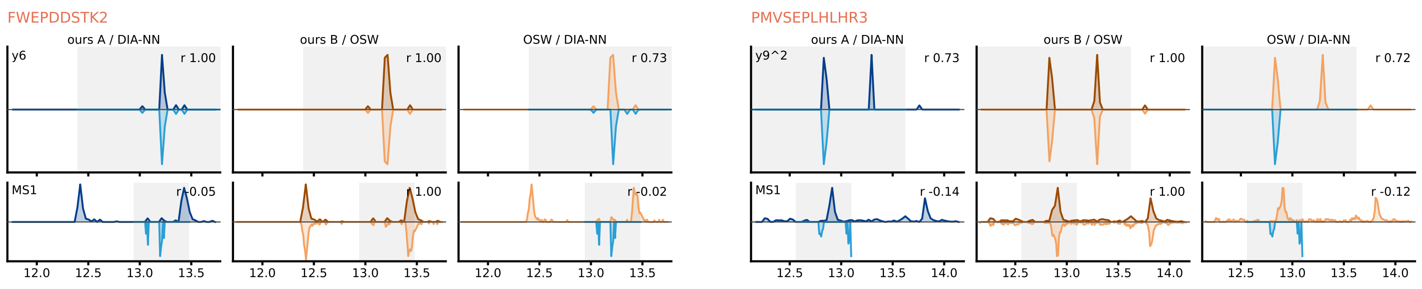
All engines agree (9)



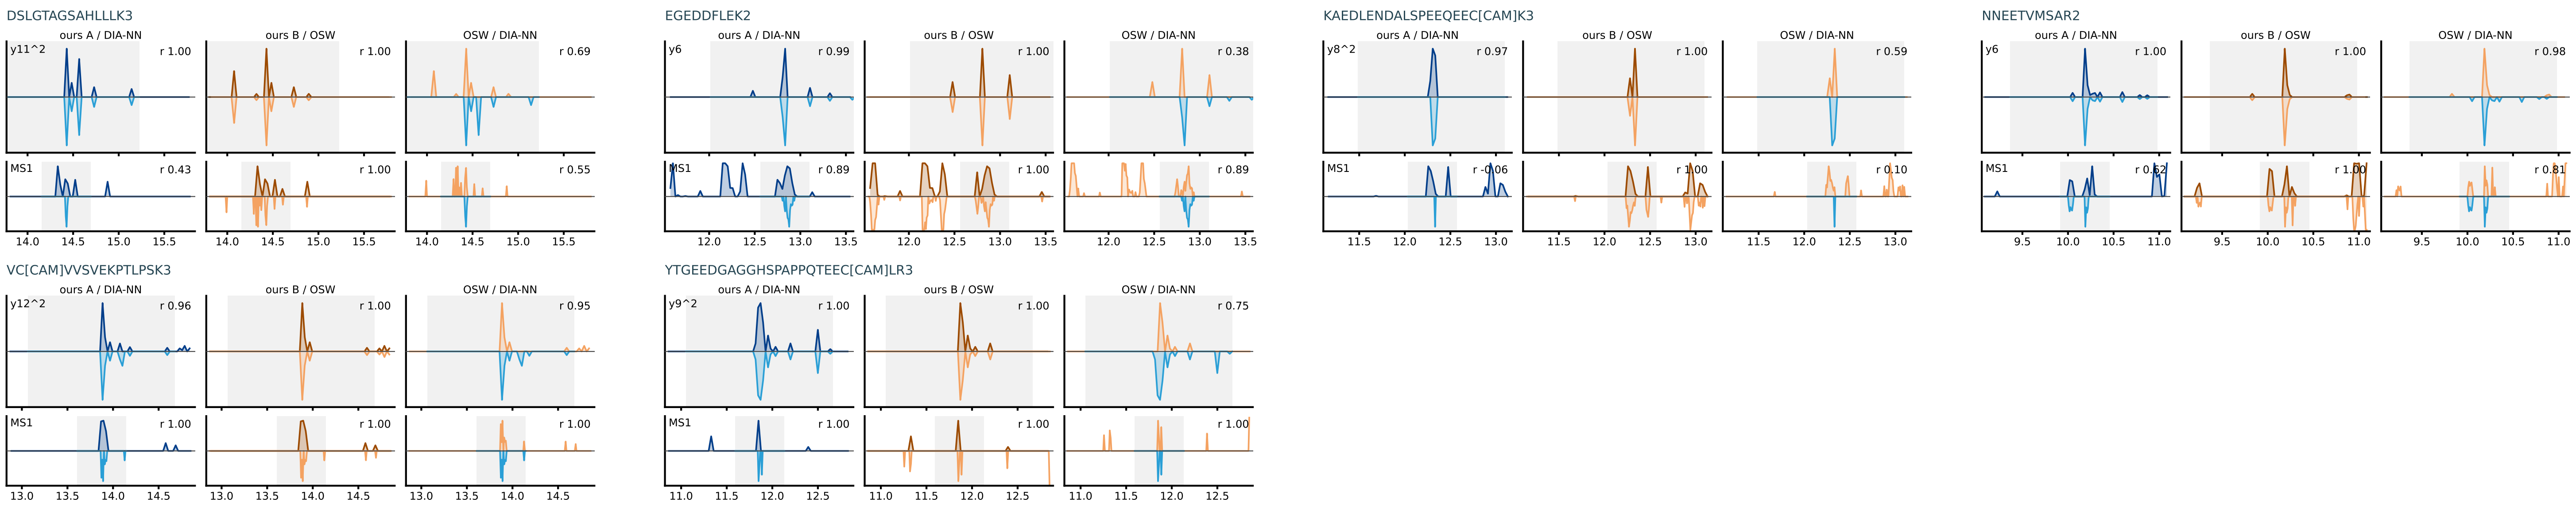
Low signal / noisy (1)



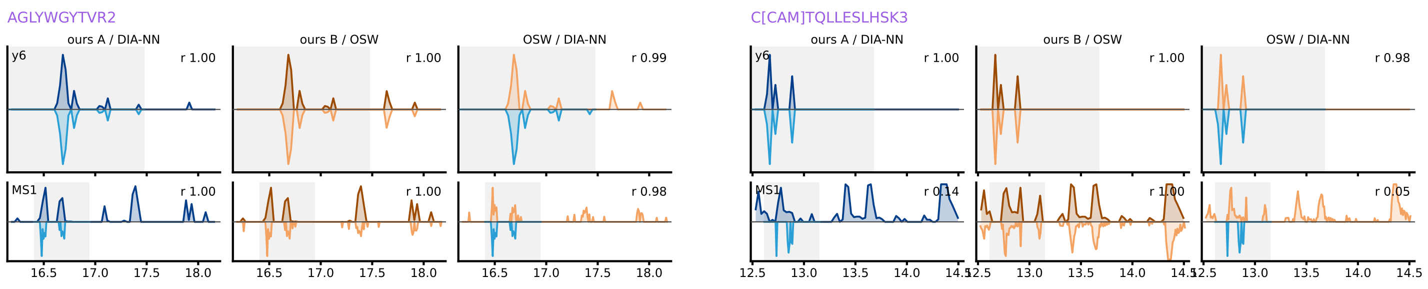
MS2 shape differs, OSW higher (2)



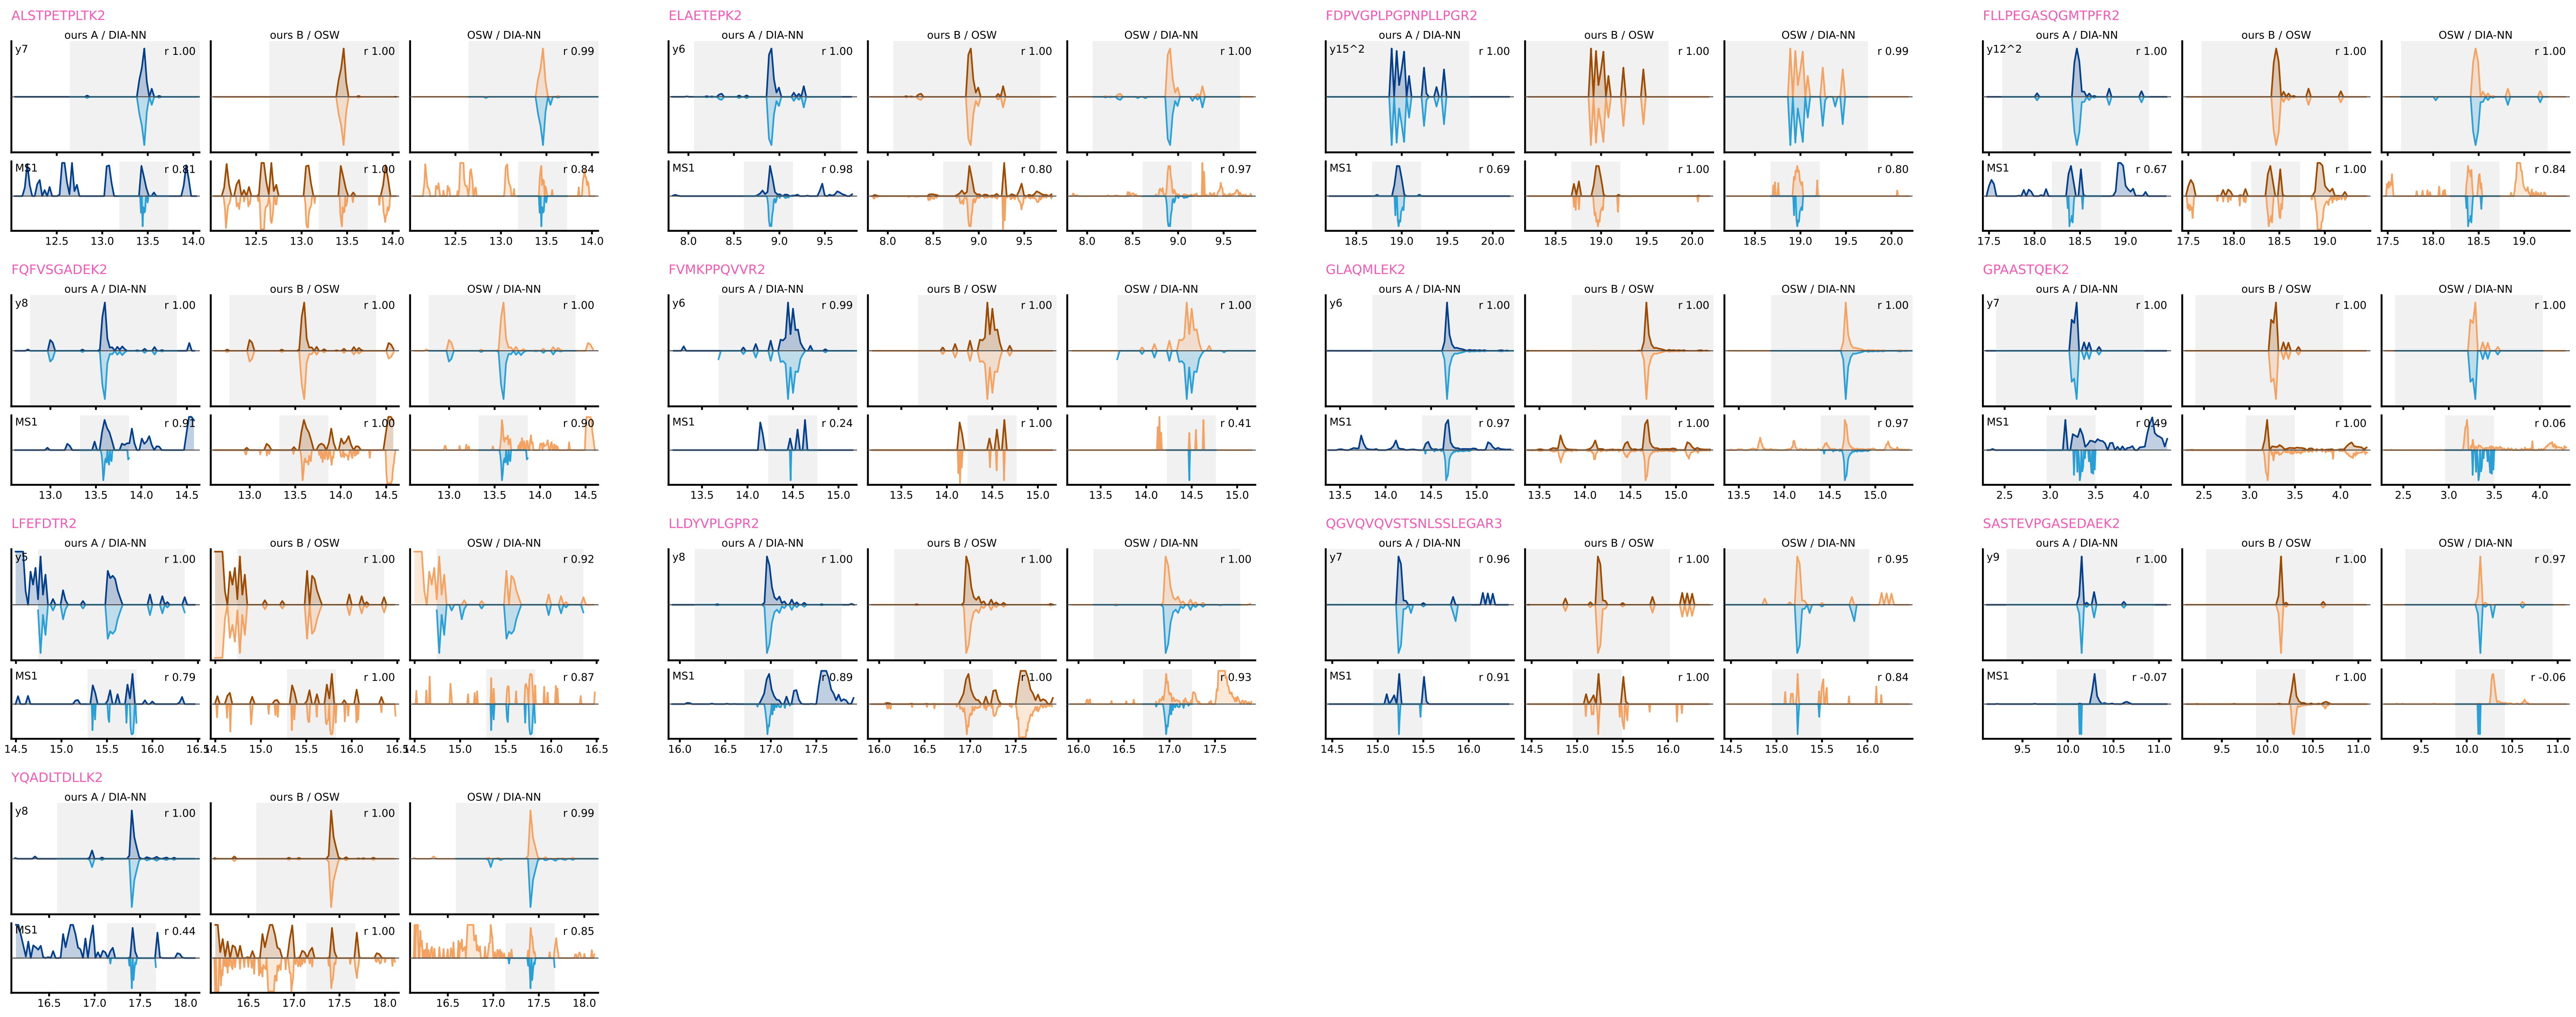
MS2 shape differs, DIA-NN higher (6)



Truncated common span (DIA-NN XIC off-centre) (2)



MS1-only divergence (ours A vs DIA-NN) (13)



Minor differences (17)
