Run 01, stratified sample: mirrored pairwise XICs by divergence mode

Each precursor: three pair panels, first engine up, second mirrored down; top: top library fragment, bottom: MS1 M+0; RT in min; each trace scaled to its max inside DIA-NN's span (grey); r = Pearson on common span. ours A = DIA-NN rules (max, mass-corrected), ours B = OpenSWATH rules (sum, unit isotope spacing).

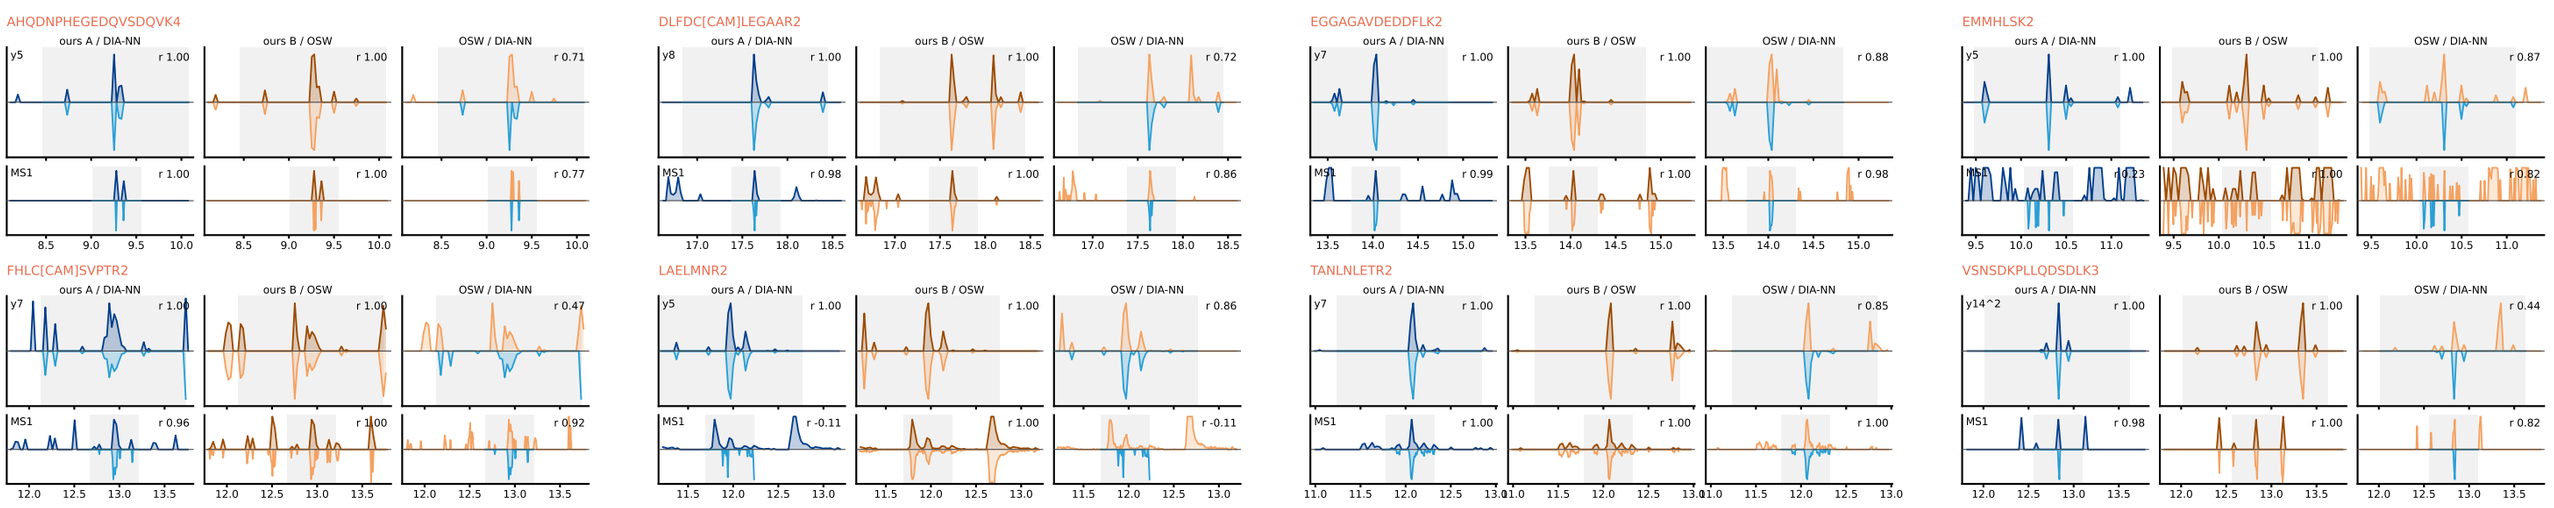

All engines agree (8)

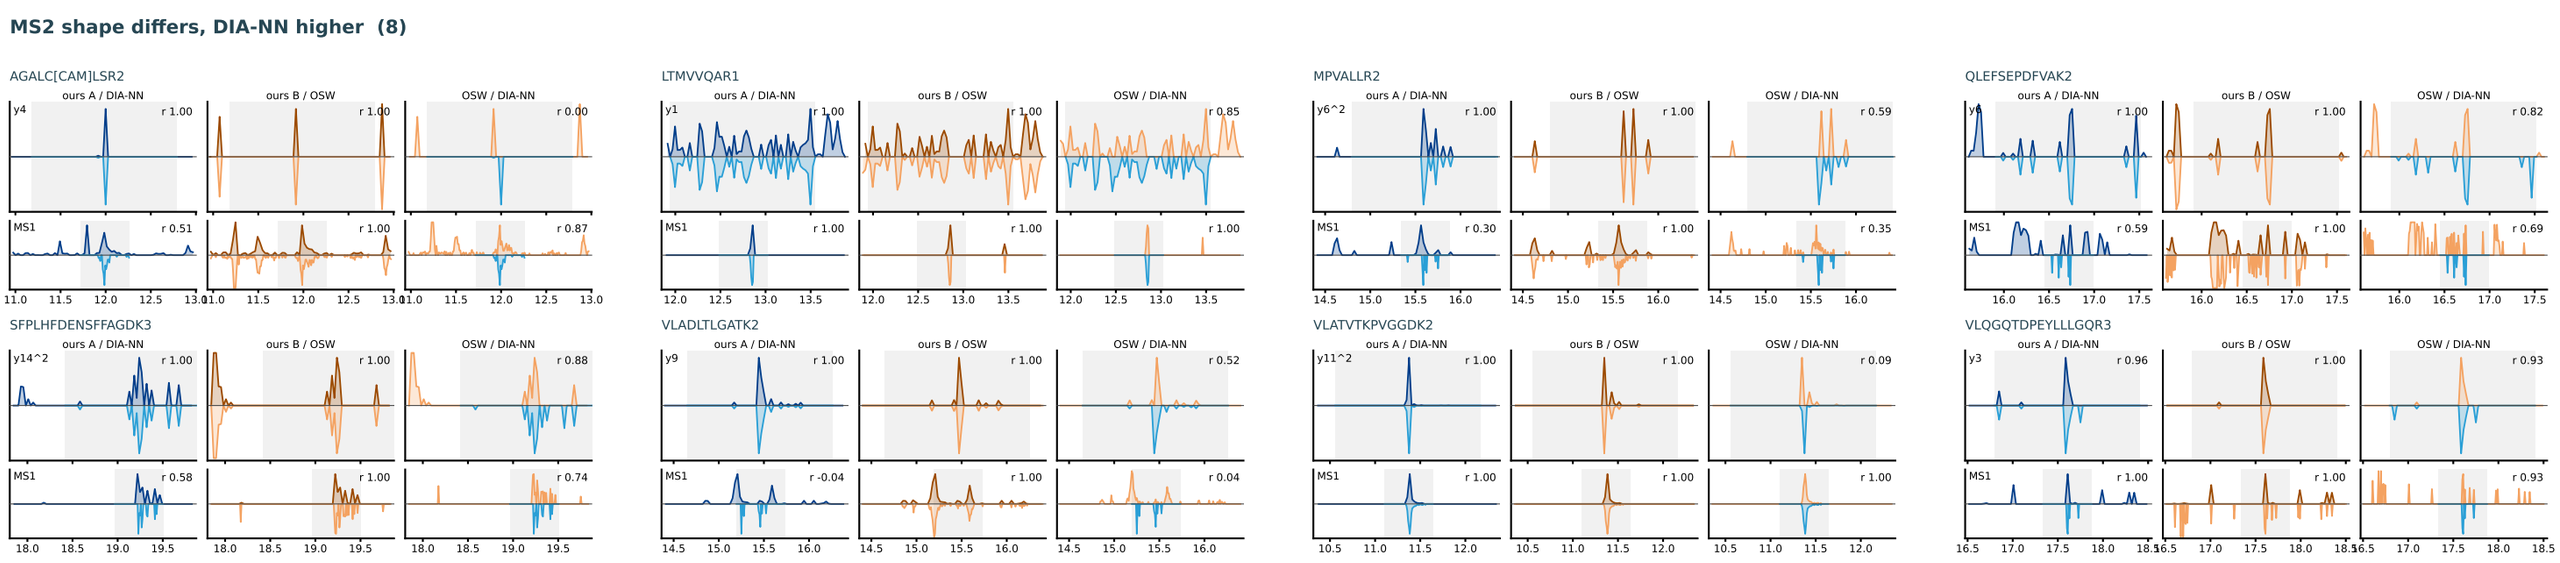

Low signal / noisy (8)

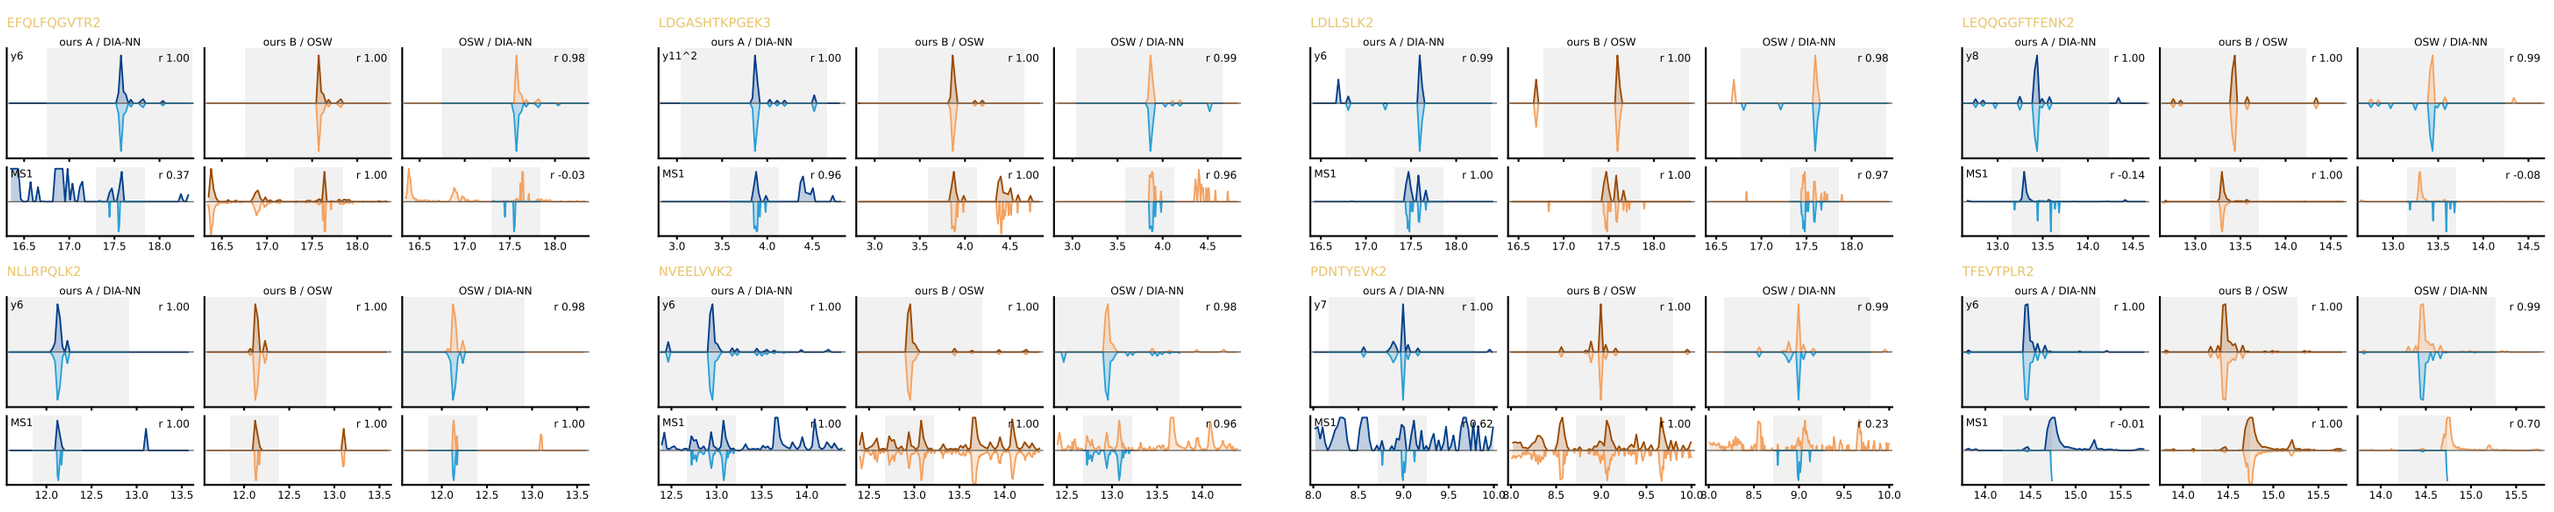

MS2 shape differs, OSW higher (8)

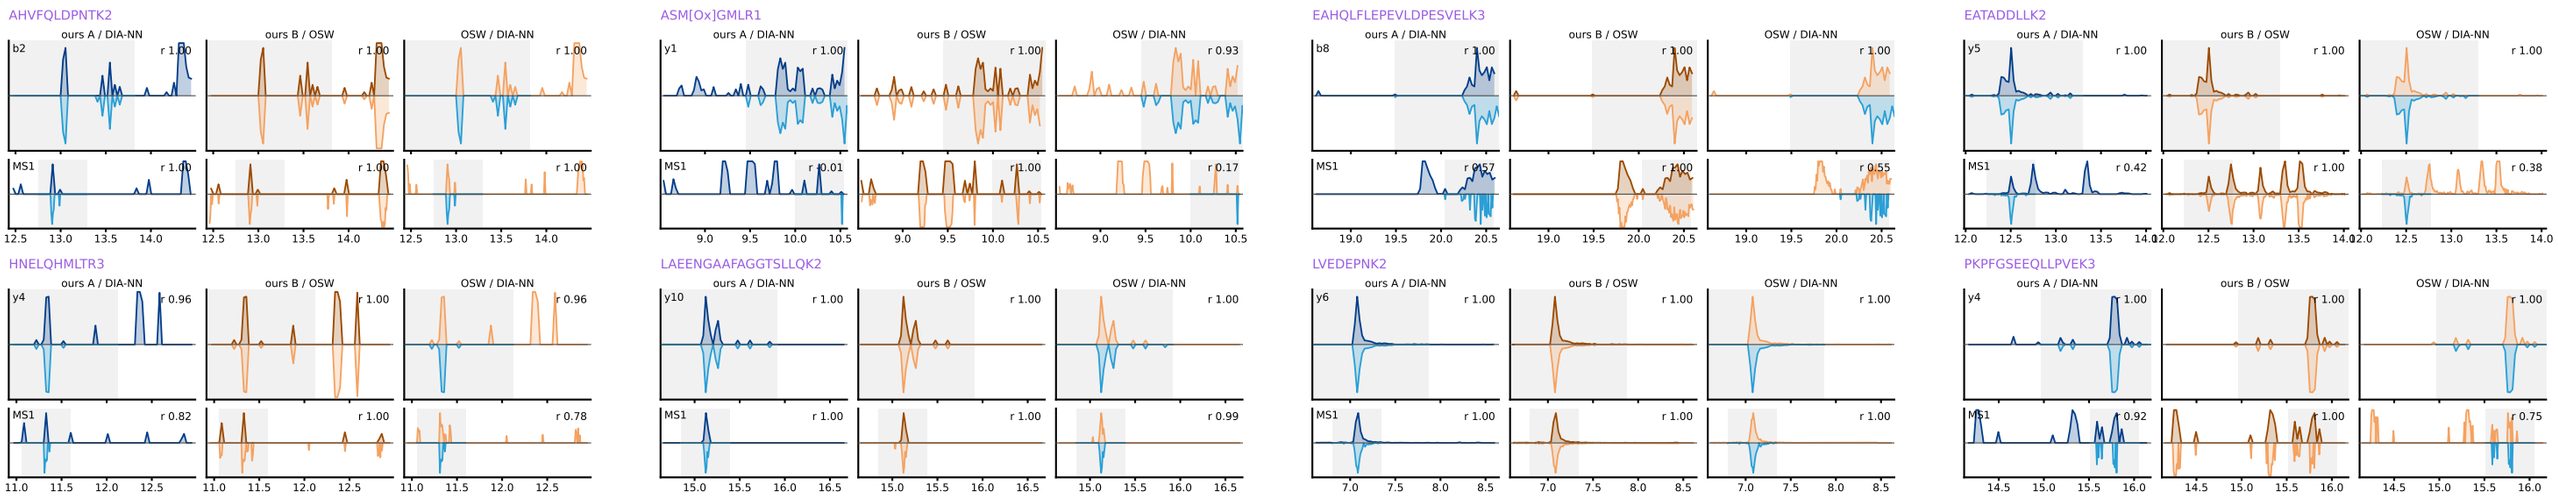

MS2 shape differs, DIA-NN higher (8)

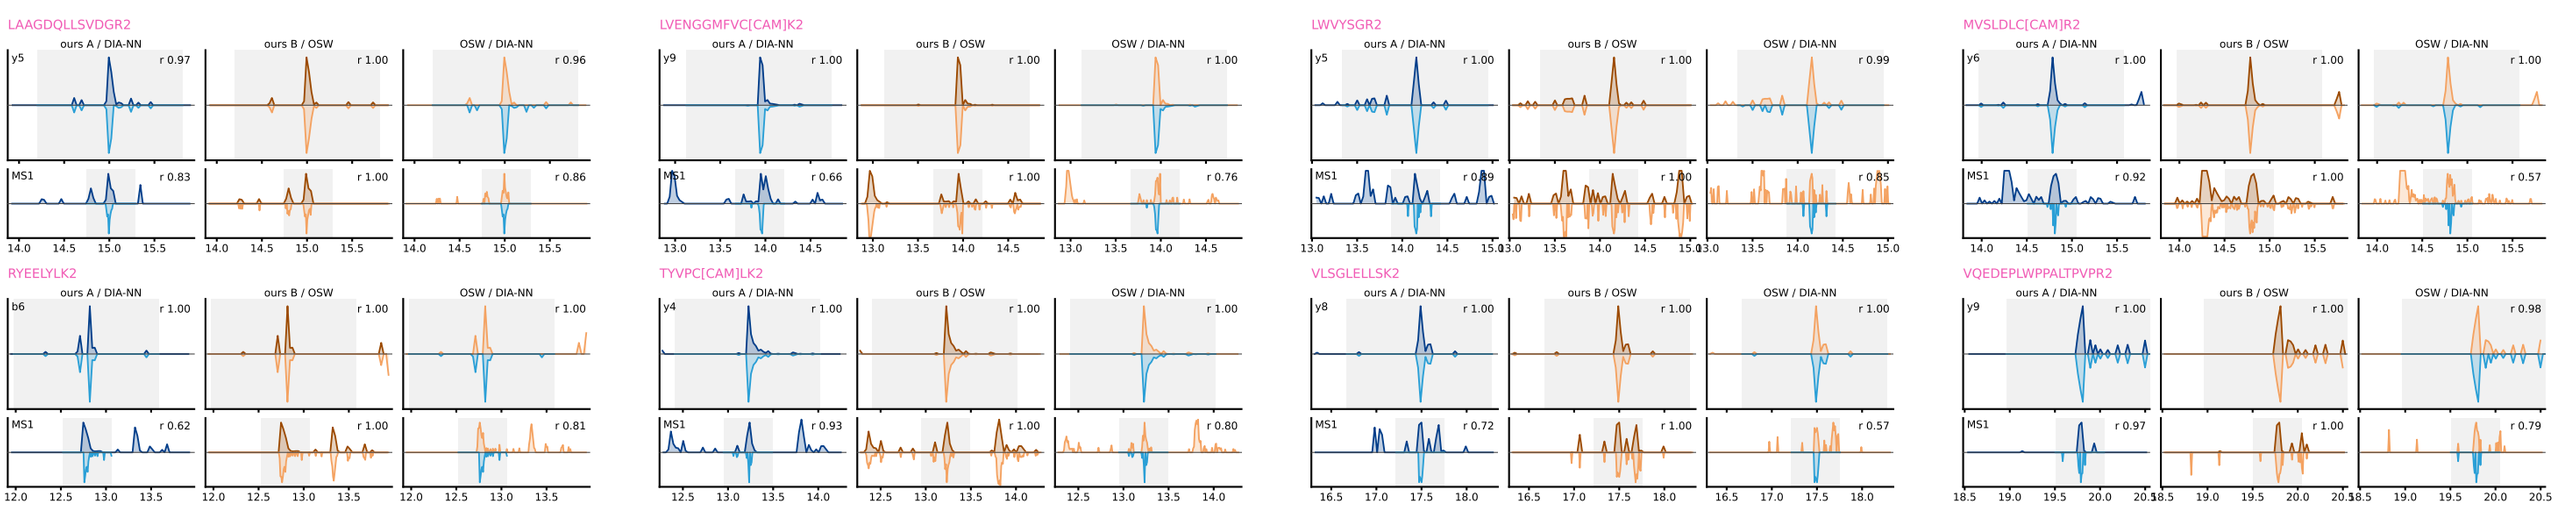

MS2 scale-only (sum vs max) (8)

Truncated common span (DIA-NN XIC off-centre) (8)

MS1-only divergence (ours A vs DIA-NN) (8)

Minor differences (8)
