Trace quality vs mass tolerance (MS2 and MS1 at the same k; numbers = MS2 half width in ppm; dotted = 6σ, dashed = DIA-NN's accuracy)
fragment co-elution (median mean pairwise r; dropped fragment = 0)
fragments absent at the apex
signal outside ±3 windows of the apex (interference / noise admitted)
library cosine at the apex (median)
MS1 M+0 vs summed fragments (median r)
Astral run 01
timsTOF A01
%
tolerance (multiples of the measured width σ)
